

# JUNE 2024

## CENTRAVIS SEAMLESS CONTINUITY

Despite the ongoing war in Ukraine, Centravis continues to operate efficiently. We continue to uphold our standards in supplying stainless steel tubes and pipes, reinforcing our position as a leading global supplier. Centravis focus on innovation and adaptability is crucial, enabling us to meet your needs effectively and remain a reliable partner. As a strategic enterprise in Ukraine, our role extends beyond commerce to reinforcing national resilience and wartime economy. The dedication of our team has been key in achieving significant milestones. In 2023, we proudly delivered 12 thousand tons of products worldwide, demonstrating our operational capabilities and commitment to our clients.

This bulletin provides updates on the current operational status of Centravis mill and the proactive measures our team has implemented to ensure that our operations continue uninterrupted.

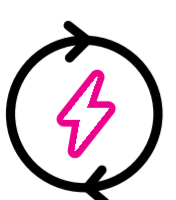

### CURRENT SITUATION AT CENTRAVIS

#### Production and Personnel

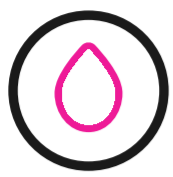

Since the beginning of the war, Centravis factory has not experienced any employee casualties or equipment damage from enemy attacks. We have not lost any trucks with billets or finished materials.

As a result of the stability of Centravis production operations and confidence of our customers, we made a 20% monthly booking plans overrun during the first 4 months of 2024 and provided a secure and consistent delivery of our products in expected volumes.

#### Energy

Centravis has consistently received sufficient energy for its production needs, thanks to prioritized governmental support recognizing the importance of the industry. As one of the top 50 largest exporters in Ukraine, Centravis maintains regular communication with the Minister of Economy to ensure stability and support for ongoing operations.

### Water supply

The water supply situation on the production sites is stable. In addition to the implementation of a closed water supply cycle, power backup systems have been made for critical equipment so that equipment can work from two sources (technical or drinking water storage tanks).

### Billet Supply and Material Provision

We maintain a substantial inventory, ensuring we always have the necessary materials and products on hand to meet client demands. Our strategic approach to inventory management enables us to respond swiftly to client orders, regardless of scale or specificity.

### Quality assurance

In May 2024, Centravis successfully passed a Certification Audit conducted by TÜV Thüringen. This was essential for certification as a material manufacturer according to AD 2000-Merkblatt W 0 and Directive 2014/68/EU for pressure equipment. Additionally, Centravis also passed a certification audit in accordance with the 2016 Pressure Equipment Safety Regulation (PESR 2016).

### Logistics

We are pleased to announce that the issues at the border crossing between Ukraine and Poland have been resolved:

- The largest checkpoint, Yagodin – Dorogusk, is now unblocked
- Delivery times are swiftly returning to pre-war schedules, improving from an average of 22 days to 17 days, with an anticipated standard of 14 days in the near future.
- For urgent cases, Centravis has developed alternative routes to avoid busy border crossings and involved additional drivers when necessary.

Addressing the challenges of sea shipments, particularly the blockade of Ukrainian ports and shelling in the Red Sea by the Houthies, Centravis is taking several proactive steps:

- Establishing alternative shipping routes that bypass Africa via the Cape of Good Hope has been implemented to address the navigational challenges in the Red Sea.
- Using European ports for shipping cargoes to customers, tailored to their preferred delivery terms.
- Supporting and co-operating with shipping partners, who engaged at the national level to resolve port blockades in Ukraine and restore the operational status of the ports expectedly within the next 3-4 months.

## CURRENT SITUATION AT CENTRAVIS

### Research & Development

Recently Centravis R&D team have successfully completed the development phase for Nickel Alloy N06625 products. This milestone not only highlights our commitment to maintaining high production standards but also showcases our capabilities in specialized alloys.

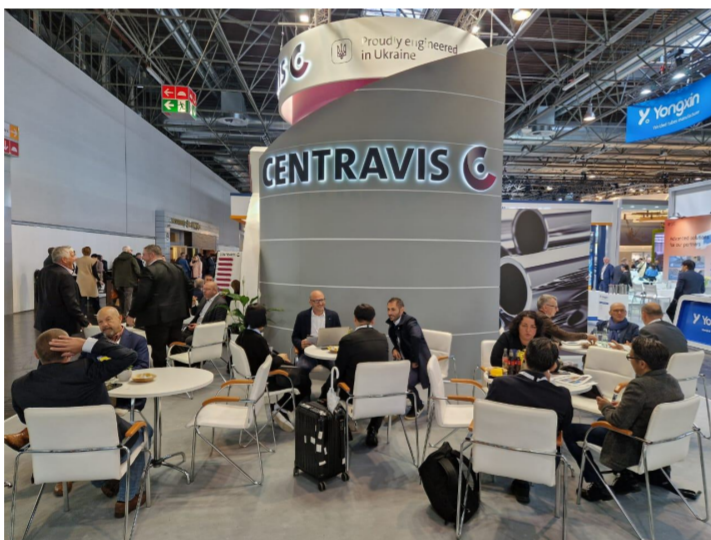

### Customer Service

Centravis has launched the "FAST LANE" program for our clients in Germany and Italy. This new initiative accelerates the production and delivery processes for selected product ranges, ensuring that customers receive our steel products more quickly than ever before.

### International Exhibition Participation

Centravis proudly participated in the Tube Trade Fair 2024 in Düsseldorf, bringing together our global team from the Americas, the Middle East & Asia, and Europe. This event served as an ideal platform to showcase our latest innovations and strengthen our industry connections, highlighting our commitment to maintaining and expanding our leadership on the global stage.

## PROJECT BUSINESS

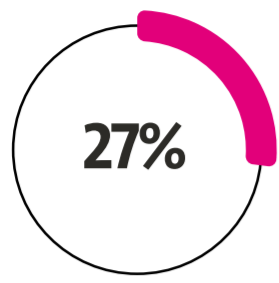

Centravis products are actively utilized in project business, supporting critical global initiatives across the Oil&Gas, Chemical, Cryogenic industries, Nuclear and Naval applications, including ships and submarines.

For example, you can find Centravis materials:

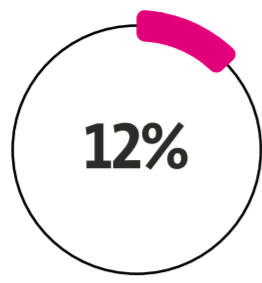

- In Nigeria (Bonny Island – LNG I by Nuovo Pignone/Shell)
- In Egypt (Midor refinery by Technip)
- In Italy (Venetian refinery – CR3 by ENI & A2A Electrical plants)
- In France on Framatome nuclear stations
- In Turkey on Tupras sites
- in Spain (Repsol Spanish refineries)
- in fuel cars and in hydrogen light commercial vehicles from Stellantis Group
- In Fincantieri ships (Air Liquide cryo application)
