FROM: Artem Atanasov, Chief Sales Officer, Centravis

Dear clients and partners,

I just finished a meeting with Andrew Balev a.k.a Stainless Andrew. He and his team has developed a groundbreaking technology that allows for a 30% reduction in the thickness of austenitic stainless steel (grades 301, 304L, 316L) without compromising formability, applicable to sheets, strips, plates, and tubes.

This innovation contributes to weight reduction, enhanced durability, and improved resistance in extreme conditions. Centravis team has figured out how to determine the optimal recrystallization temperatures during the heat treatment process to achieve the perfect combination of strength and ductility.

We are already seeing positive outcomes from applying this technology in the automotive industry, notably in high-pressure environments, where it offers not just performance enhancements but also significant economic and environmental benefits. We are keen to explore how this breakthrough can be adapted to your projects, enhancing efficiency and sustainability. For more information or to discuss potential applications, please reach out directly to me or our technical team.

Regarding the regular update - I'm pleased to report that all aspects of our operation at Centravis are performing very well. Our production lines, logistics systems, and equipment are all functioning smoothly, and we have a steady supply of all necessary materials.

Our global sales offices are operational and ready to assist with any inquiries or support you might need. We thank you for your ongoing partnership and look forward to continuing to meet your needs with the high level of efficiency and reliability you expect from us.

Should you have any questions or require assistance, please feel free to reach out.

Best regards,
Artem Atanasov
